## Internship @ Duracell Belgium 2022 (13 weeks)

---

Internship during final year of studies in Applied Computer Science in which the main goal was to increase information availability based on production data. To achieve this the objective was to create a Power BI report to monitor the Overall Equipment Efficiency (OEE). In addition to the main goal, I completed several smaller projects using Microsoft technologies such as SharePoint, Power Apps and Power Automate. All projects are documented and a slightly edited version of the documentation can be found on my portfolio.

## Skills

---

UML  
SQL  
Power BI  
Python  
BPMN  
Github  
Flutter  
Driving License

## Education

---

### MSc Business Administration

**Master thesis:** Differences between digital natives and active older adults when using Augmented Reality applications: an application of the UTAUT model

Free University of Brussels  
**2022-2024**

## Languages

---

Dutch (Native)  
English (C1)  
French (B1)  
German (A1)

### BSc Applied Computer Science: Application development

Thomas More Kempen  
**2021-2022**

### BSc Applied Computer Science: Artificial Intelligence

Thomas More Kempen  
**2018-2022**

## Student Jobs

---

### Shop assistant Bakery

During my studies I took on a student job at a bakery near me. I always combined studying with working on the weekends because I think even though the job doesn't align with my studies it still helps you in certain ways. For example for me it helped me in becoming a bit more social.
